*iKey, the world leader in rugged computer peripherals, is proud to introduce the compact WB-86 keyboard with full-travel keystroke. Designed to be fully submersible while maintaining the same feel of an office-grade keyboard, the new product gives users the benefits of a washable keyboard without sacrificing typing speed or accuracy.*

Austin, Texas ([PRWEB](#)) November 07, 2011 -- iKey, the world leader in rugged computer peripherals, is proud to introduce the [compact WB-86 keyboard](#) with full-travel keystroke. Designed to be fully submersible while maintaining the same feel of an office-grade keyboard, the new product gives users the benefits of a washable keyboard without sacrificing typing speed or accuracy.

“The WB-86 is iKey’s response to our customers that have been looking for a keyboard that was fully ruggedized, but still offered the user-friendliness of a traditional consumer keyboard,” said iKey’s operational manager Dave Huddleston. “It was designed for and built from the finest materials and is ultimately representative of our world-renowned quality.”

Featuring individually lit, red LED keys and a wear-proof, laser etched legend, the WB-86 packs everything you need in a keyboard while measuring just 11.06” x 5.16” x 0.836” (w-h-d). This makes the product both versatile and convenient for mobile and point-of-sale applications or any application where space is at a premium.

Sealed to IP68 standards, the WB-86 is completely sealed and submersible, making it resistant to dirt, dust and liquids. This allows for easy cleaning and protection from spills.

“Because it is completely protected from ingress, it is uniquely suited for a broad range of applications that demand continued operation under conditions where normal equipment simply would not last,” Huddleston commented.

The WB-86 has a USB interface, and does not require any additional software or drivers. For more information on this product, visit iKey online at [www.iKey.com](http://www.iKey.com)

About iKey, Inc.: iKey designs and manufactures rugged, [sealed keyboards](#) and pointing devices for industrial, public safety, medical and military applications.
